

Dear Hiring Manager,

I am writing to apply for the AI and Digital Innovation Internship at UNICEF. As a Software Engineering student at Limkokwing University with a proven track record in digital strategy, I am uniquely positioned to bridge the gap between software development and user-centric innovation.

I bring hands-on commercial experience. While working as a Content Strategist at Regium Touch, I didn't just create content, I analyzed audience behavior to inform strategy. This exposed me to the application of AI: how predictive analytics and automation can optimize engagement. I am eager to now reverse-engineer that process: moving from using digital tools to building intelligent systems.

My role as a DPG Champion under the Ministry of Communication, Technology and Innovation (MOCTI) taught me to lead digital transformation projects with real community impact. I learned that AI is useless without adoption; my strength lies in explaining complex tech to diverse stakeholders while writing the backend code to support it.

My technical toolkit includes [list 3 specific skills: e.g., Python, SQL, and React] , but my superpower is my adaptability. I don't just want to learn new skills I want to apply them immediately to help UNICEF in embanking in the journey of AI integration, Thank you for your time and consideration.

Yours sincerely,
Sarah Princess Okike
